## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on March 5, 2009 has been entered.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 16 is rejected under 35 U.S.C. 103(a) as being unpatentable over Imamura et al. (JP 2002048188) in view of Gadd (US 2,764,136).

Imamura et al. teach a vibration damping device for damping vibrations of a machine (Figs.1 – 16) , the vibration damping device comprising a laminated plate formed by laminating a specified number of inner plates (Fig.1b, Item 13c) and an outer plate (Fig.1b, Item 13b) that is disposed on an outside of the specified number of the inner plates, wherein intermittent attaching is performed on the inner plates when coupled to members of the machine that is an object of vibration damping, and the

specified number of inner plates are tightly sealed by the outer plate (Fig.1b, Item 13b and Fig.7) and the members of the machine; but fails to disclose wherein intermittent welding is performed on peripheral edges of the inner plates along a circumferential direction of the inner plates when the laminated plate is coupled to members of the machine that is an object of vibration damping.

On the other hand, Gadd teaches a vibration damping device comprising a plate (Fig.5, Item 26) attach to a machine member (Fig.5, Item 10) by intermittent welding (Fig.5, Item 28) on peripheral edges of the plate along a peripheral direction of the plate when coupled to members of the machine that is an object of vibration damping.

It would have been obvious to a person with ordinary skill in the art at the time of the invention was made to employ the Gadd configuration with the Imamura et al. design because it would provide a secure way of fixing the plates to the machine member that would not get loose due to the induced vibrations, additionally, it would provide a way of tuning the plates in order let them vibrate at a predetermined sound frequency range.

***Allowable Subject Matter***

3. Claims 22, 24 – 27, 36 and 38 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Arguments***

4. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection. The Examiner considers that the obvious combination of the patents to Imamura et al. and Gadd teach the limitations described in claim 16 as discussed above.

***Conclusion***

5. The attached hereto PTO Form 892 lists prior art made of record that the Examiner considered it pertinent to applicant's disclosure.
